FOREWORD .....	13
INTRODUCTION .....	17
1 Scope .....	19
2 Normative references .....	19
3 Terms and definitions .....	21
4 Identification and classification .....	37
4.1 Arrester identification .....	37
4.2 Arrester classification .....	39
5 Standard ratings and service conditions .....	39
5.1 Standard rated voltages .....	39
5.2 Standard rated frequencies .....	39
5.3 Standard nominal discharge currents .....	39
5.4 Service conditions .....	41
6 Requirements .....	41
6.1 Insulation withstand of the arrester housing .....	41
6.2 Reference voltage .....	43
6.3 Residual voltages .....	43
6.4 Internal partial discharges .....	43
6.5 Seal leak rate .....	43
6.6 Current distribution in a multi-column arrester .....	43
6.7 Thermal stability .....	43
6.8 Long-duration current impulse withstand .....	43
6.9 Operating duty .....	45
6.10 Power-frequency voltage versus time characteristics of an arrester .....	51
6.11 Short-circuit .....	51
6.12 Disconnector .....	51
6.13 Requirements for auxiliary equipment such as grading components .....	51
6.14 Mechanical loads .....	51
6.15 Electromagnetic compatibility .....	53
6.16 End of life .....	53
6.17 Lightning impulse discharge capability .....	53
7 General testing procedure .....	53
7.1 Measuring equipment and accuracy .....	53
7.2 Reference voltage measurements .....	55
7.3 Test samples .....	55
8 Type tests (design tests) .....	55
8.1 General .....	55
8.2 Insulation withstand tests on the arrester housing .....	59

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### SURGE ARRESTERS -

#### Part 4: Metal-oxide surge arresters without gaps for a.c. systems

### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard 60099-4 has been prepared by IEC technical committee 37: Surge arresters.

This edition includes the following significant technical changes with respect to the previous edition.

- Clauses 1, 2 and 3 contain common subclauses that cover all arrester types. Clauses 4 to 9 contain subclauses that apply to porcelain-housed arresters. To a great extent, the content of Clauses 4 to 9 also applies to arrester types other than porcelain-housed. Any exceptions that apply to polymer-housed, GIS, separable and dead-front, and liquid-immersed arresters are included in Clauses 10 to 13 as entire subclauses, not as parts of subclauses. That is, if any subclause of Clauses 4 to 9 does not apply in its entirety to a particular type of arrester, then a replacement subclause is given in its entirety in the appropriate Clauses 10, 11, 12, or 13. This avoids the necessity for the user of the document to judge which part of a clause has been amended.

- Table 1 has been modified. The previous Table 1 included references to subclauses for type testing. Such references are really not appropriate in Clause 4 and have been transferred to a new table in Clause 8.
- Clauses 6, 8, 11, 12 and 13: modifications have been made to short-circuit requirements.
- Requirements of Clause 13 (mechanical considerations) have been incorporated into Clauses 5, 6, 8, 10, 11, 12 and 13, and Annex A of this new edition.

This consolidated version of IEC 60099-4 consists of the second edition (2004) [documents 37/298/FDIS and 37/300/RVD] and its amendment 1 (2006) [documents 37/324/FDIS and 37/325/RVD].

The technical content is therefore identical to the base edition and its amendment and has been prepared for user convenience.

It bears the edition number 2.1.

A vertical line in the margin shows where the base publication has been modified by amendment 1.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of the base publication and its amendments will remain unchanged until the maintenance result date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## INTRODUCTION

This part of IEC 60099 presents the minimum criteria for the requirements and testing of gapless metal-oxide surge arresters that are applied to a.c. power systems.

Arresters covered by this standard are commonly applied to live/front overhead installations in place of the non-linear resistor-type gapped arresters covered in IEC 60099-1.

**Withdrawn**

## SURGE ARRESTERS –

### Part 4: Metal-oxide surge arresters without gaps for a.c. systems

#### 1 Scope

This part of IEC 60099 applies to non-linear metal-oxide resistor type surge arresters without spark gaps designed to limit voltage surges on a.c. power circuits.

#### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
